RDC

Mobile Deposit

Account holders can transmit a check from anywhere by simply using the camera on their smartphone and following the cues on the screen. The application's compression algorithm optimizes the image size for faster processing. Once the user submits the payment, server-based flexible risk thresholds, image analysis, and real-time duplicate detection ensures fraudulent checks are stopped before they enter your system.

OSSNA's RDC Connector seamlessly integrates the checks deposited through the Teller or the Mobile to the Financial Institution's Core Processor, updates the Account Record and sends Acknowledgement to the Account Holder.

Teller Deposit

Provides your account holders with exceptional service at one of your first points of contact: the teller window. Teller Capture automates processes, your financial institution will benefit from operational efficiencies including reduced manual errors and image quality returns.
